

SEO Audit Report

luxeclay.in

Prepared 2026-06-14

40_{/100}
On-page technical health

Executive Summary

This audit reviews the on-page and technical SEO health of **luxeclay.in**. We checked 10 on-page signals and reviewed the site's robots.txt and XML sitemaps. The site passed **4** checks and has **6** issues to address. The most impactful fixes are detailed below.

Technical Snapshot

Check	Result	Detail
Page title	FIX	15 chars: "Home - luxeclay"
Meta description	PASS	137 chars
Canonical tag	PASS	https://luxeclay.in/
Structured data	PASS	4 JSON-LD block(s)
H1 headings	FIX	2 found
Image alt text	FIX	1/23 missing alt
HTML payload	FIX	697 KB
XML sitemap	PASS	54 URLs across 6 sitemaps

Issues to Fix

1. Title too short (15 chars): 'Home - luxeclay'. Aim for 50-60 keyword-rich chars.
2. Duplicate meta description tags (2×) — likely SEO-plugin/theme conflict.
3. Duplicate og:title tags (3×) — two plugins/theme emitting social tags.
4. Multiple H1 tags (2): ['FLASH SALE !!', 'HANDCRAFTED, JUST FOR YOU.']. — use one keyword-focused H1.
5. 1/23 images missing alt text.
6. Large HTML payload (697 KB) — review page-speed impact.

What's Working

- ✓ Meta description present (137 chars).
- ✓ Canonical tag present: https://luxeclay.in/
- ✓ Viewport meta present (mobile-friendly signal).
- ✓ 4 JSON-LD structured-data block(s) present.

Crawlability

Disallow rules: /wp-content/uploads/wc-logs/, /wp-content/uploads/woocommerce_transient_files/, /wp-content/uploads/woocommerce_uploads/, /*?add-to-cart=, /*?*add-to-cart=, /wp-admin/, /product-category/all-products/, /shop/

Conflict: URLs listed in the sitemap but blocked by robots.txt (Google is told to both crawl and not crawl them):

- <https://luxeclay.in/shop/> — blocked by *Disallow: /shop/*
- <https://luxeclay.in/product-category/all-products/> — blocked by *Disallow: /product-category/all-products/*

Keyword, Traffic & Backlink Data

Not included in this report. Keyword rankings, organic traffic estimates, competitor mapping, and backlink profile require DataForSEO API credentials. Add them to `seo/.env` and re-run to include this section.

Generated by the MAILER SEO audit tool. On-page data fetched live from the target site.
